Positioning Module(multi-channel pulse output)
F3YP22-0P/F3YP24-0P/F3YP28-0P

	Pulse Output	Communication	Analog Output
Single function PTP (2/4/8/15 Axes)	F3YP22/24/28 • 2Axes/4Axes/8Axes • Output Pulse Rate : 7.996Mpps • Start Up time : 0.04ms~ • Control Period : 0.125ms • Pulse Counter : 1ch Released 2013/01 	F3NC96-0N/F3NC97-0N • Built-in MECHATROLINK-II/-III interface- Up to 15 axes per module • High-speed, high-throughput communication Transmission rate: 100Mbps Cycle time: 0.25ms for 4 axes (for F3NC97-0N) 2004/02 2009/07 	
Advanced function PTP (1/2/4Axes)	F3NC32-0N/F3NC34-0N • 2 or 4 axes per module - Max. pulse rate: 5Mpps - Linear, circular, helical interpolation - Built-in pulse counter & general I/O contacts 2004/08 		F3NC51-0N/F3NC52-0N - Speed reference voltage output - Linear/circular interpolation 1997/08 
Motion	Techno's PLMC40 - Up to 4 axes per module - Precise motion control - Synchronous control, electronic cam, contour control, multi-axial interpolation 	Techno's PLMC-MII EX - Built-in MECHATROLINK-II interface - Up to 16 axes per module - Precise motion control - Synchronous control, electronic cam, contour control, multi-axial interpolation  	F3NC61-0N - for torque control - Analog output (2ch), analog input, built-in pulse counter 2000/10 

F3YP22/24/28 Product Overview

- Positioning modules mounted onto the base module of an FA-M3 range free controller.
- Generate a position control path according to commands from the CPU module and output position reference as pulse trains.
- Up to two, four and eight axes control by F3YP22, 24 or 28 respectively
- For driving servo motors or drivers, as well as stepper motors or drivers in position control applications with higher frequency pulse.

Positioning Module (Multi Channel Pulse Output)
F3YP22-0P / F3YP24-0P / F3YP28-0P

Offer the accelerating capability for electronics manufacturing equipment.

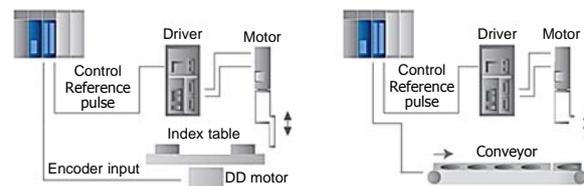

Higher Speed and Shorter Control Period

- Shorter start up time
- Shorter control cycle
- Higher output pulse frequency
- Faster READ/WRITE command(for F3SP7□)
 - Application speeding example
 - LED testing machine/LED taping machine
 - Cycle time:0.166 s/pcs. → 0.1 s/pcs.
 - Connector Manufacturing equipment
 - Cycle time:1,000 rpm → 2,000 rpm
 - Coater
 - Line speed :30 m/min → 80 m/min

Embedded High-speed Pulse Counter with Positioning Functions

- Fine positioning and speed detection
- Stable and accurate control by counter-triggered positioning and high-speed pulse output
- Synchronized control with peripheral devices by cam-operated switch

Higher Speed and Shorter Control Period

Shortening cycle time of positioning

Shorter Startup Time

- Startup time
 - 40μs for 1axis
 - 90μs for 4axes
 - 150μs for 8axes
- 125μs or less delay even with other axes in motion.
- 1μs start up time enabled for external trigger

Shorter Control Cycle (1ms→0.125ms)

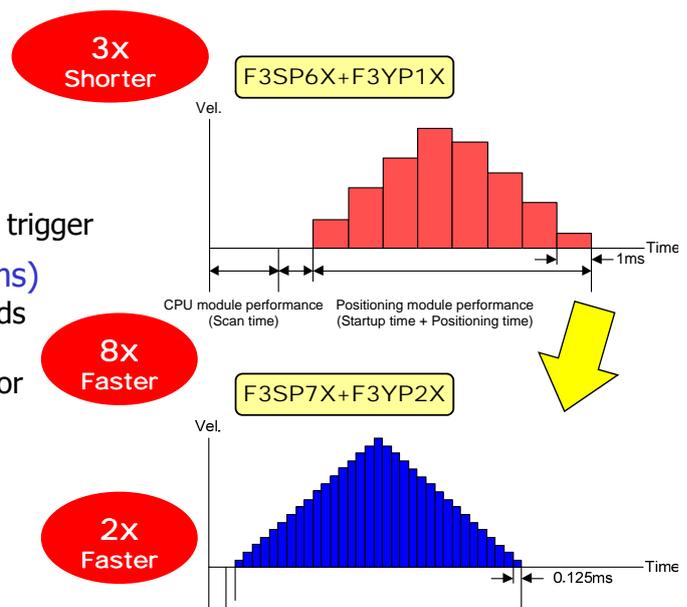

- Smoother output positioning commands
- Stable motor control
- Quick response to change speed and/or target position during operation
- High speed update of status (complete position, current position)

Higher Pulse Frequency

- Output pulse rate: up to 7.996Mpps.

READ/WRITE Command

- Enabled faster scan time (for F3SP7 □)
 - READ 11words:shortened from 64.6μs to 12.5μs

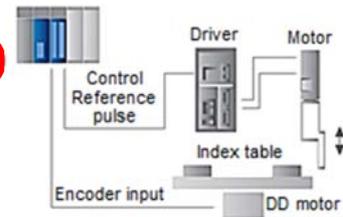

Embedded High-speed Pulse Counter

Capable for Various applications

Accurate Detection by High-speed Pulse Counter

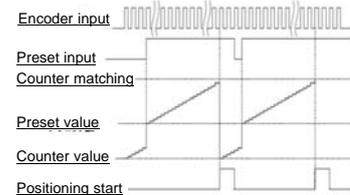

- 1 channel pulse input capable up to 8Mpps
 - Linear counter/ Ring counter
 - 3 high-speed contact inputs and two high-speed contact outputs for a counter.
 - Cam-operated switch function: 16 points
 - Refresh cycle: from 1μs

2x more

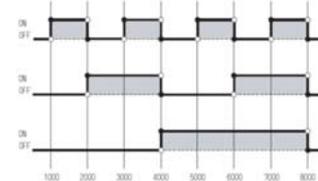

Counter-triggered start and High-speed contact output reducing control dispersion and delay

- Immediate main axis or an external device detection enables quicker and more accurate positioning
- Free from scanning time to control, contribute to produce stable quality product

Enable to synchronize with external devices by cam operated switch function

- Detect the main axis position, start external devices quickly
- Enable to accelerate scan time and shorten ladder programs

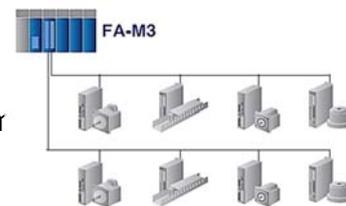

8-axes max. for Single Module, Cutting Space and Cost

Reduces cost of your equipment

Most suitable for multi axial positioning system

- Capable of up to 8axes control by single module
Reduces module cost per one-axis
- Enabled to build 128 axes maximum positioning system by using 16modules of 8axes model(F3YP28-0P)

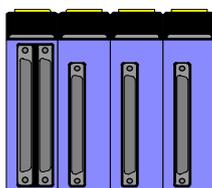

Line up 3 models, 2-axes/4-axes/8-axes

- New 2-axes model with compatible software interface
- 2-axes model for small applications.

High-speed pulse counter/High-speed input-output contact

- All-in-one module including pulse counter and DIO
- Multi-functions built-in single slotted module, save more space and costs

- Positioning module(8axes)
- Pulse counter module(1ch.)
- Output module(2points)
- Input module(3points)

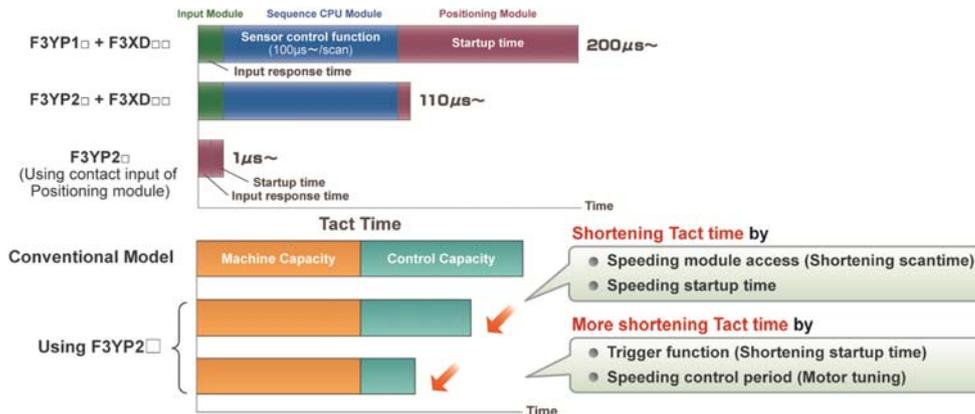

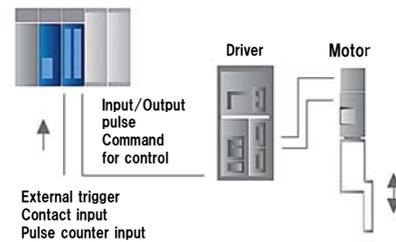

Space 1/4

Costs 2/3

Features: New functions for reducing equipment tact time

Quick startup and stop by trigger function

- Startup time available at 1μs by direct trigger from external devices with preset destination or speed.
 - Software trigger
 - Contact input trigger
 - Counter status trigger
 - Counter zone coincidence trigger
 - Positioning Completed input relay trigger

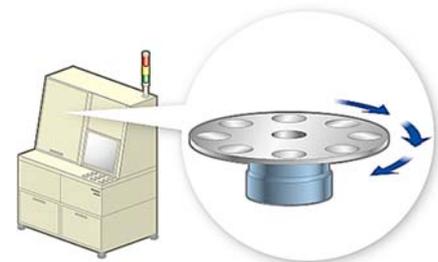

Features: New functions for reducing equipment sets up

New control mode/operation method

- Speed Control/ Speed-Position Switchover Control
 - Supports Speed control and Speed-Position Switchover Control in addition to Positioning Control - PTP operation, multi-axis linear interpolation
 - Effective for infinite rotation of main axis control

New Position Data Table Operation

- Running upon the preset position-speed data record registered on F3YP2.
- For equipment using repeated movement
Position data: 10 data per axis

Record No.	Target position mode	Target position (pulse)	Acceleration/Deceleration mode	Target speed (pulse/s)	Acceleration time (ms)	Deceleration time (ms)	Startup speed (pulse/s)
1	0	0	1	2,000	100	100	0

Item		Specifications
		F3YP2□-0P
Control	Number of control axes	2-axes, 4-axes, 8-axes
	Control method	Open-loop control using position reference pulse output
	Output pulse type	RS-422A compliant differential line driver (ISL32172E or equivalent) Pulse type selectable for each axis: CW/CCW pulse, travel/direction pulse, and phase A/phase B pulse
	Output pulse rates	- Using servo motor CW/CCW : 7,996,000 Travel/direction : 7,996,000 Phase A/B(x4) : 7,996,000 Phase A/B(x2) : 3,998,000 Phase A/B(x1) : 1,999,000 - Using stepper motor CW/CCW : 1,999,000 Travel/direction : 1,999,000 Phase A/B(x4) : 1,999,000 Phase A/B(x2) : 999,500 Phase A/B(x1) : 499,750
	Control cycle time	0.125 ms
External contact input	4 inputs per axis (origin input, forward limit input, reverse limit input, encoder Z-phase input) (Digital filter of inputs are configurable independently, forward limit input and reverse limit input are assignable to general purpose input)	
External contact output	1 output per axis (deviation pulse clear signal)	

No.1 in Industry* (2x more)

No.1 in industry* (8x more)

*1 Up to 125 μs delay may be added if another axis is in motion.

Item		Specifications
		F3YP2□-0P
Counter	Number of channels	1
	Input pulse type	CW/CCW pulse, travel/direction pulse, phase A/phase B
	Input pulse rate (pulse/s)	CW/CCW : 2,000,000 (pulse/s) Travel/direction : 2,000,000 (pulse/s) Phase A/B (x4) : 8,000,000 (pulse/s) Phase A/B (x2) : 4,000,000 (pulse/s) Phase A/B (x1) : 2,000,000 (pulse/s)
	Operation mode	Linear counter mode, Ring counter mode
	Counter functions	Counter enable/disable, Counter preset, Counter matching, Electrical cam switch, Counter latch, Speed measurement, Positioning start/stop by external trigger input, counter matching
	Z-phase input for counter	1 input (assignable to counter latch input, counter preset input, etc.)
	External contact input for counter	3 inputs (assignable to latch input, preset input, enable input, external trigger input, etc.)
	External contact output for counter	2 outputs (assignable to counter matching output, cam switch output, etc.)
Data backup	Flash ROM (100,000 times rewritable)	
Current consumption (5 V DC)	F3YP28-0P : 280 mA F3YP24-0P : 240 mA F3YP22-0P : 210 mA	
External power supply (for pulse output / for counter contact output)	24V DC F3YP28-0P : 200 mA (190mA / 10mA) F3YP24-0P : 110 mA (100mA / 10mA) F3YP22-0P : 70 mA (60mA / 10mA)	
External wiring	Connector for positioning control F3YP28-0P : 48 pins connector x 2 F3YP24-0P : 48 pins connector x 1 F3YP22-0P : 48 pins connector x 1 Connector for pulse counter : 14 pins connector x 1	
External dimensions	28.9 (W) × 100 (H) × 83.2 (D) mm ⁴	
Weight	F3YP28-0P : 175g, F3YP24-0P : 110g, F3YP22-0P : 110g	

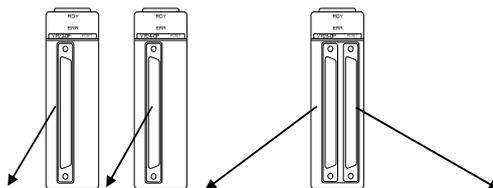

No.1 in Industry* (2x more)

*2 : Not including protrusions (see the external dimension diagram for more details).

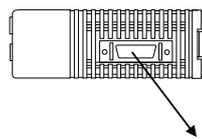

*3 : When you need to send a counter status change (e.g., counter coincidence and preset input) to the CPU module by an input relay interrupt, you can use Stop Immediately ACK relays for positioning functions by assigning them to the input relays for counters.

*4 : When using the module as a UL approved product, use limited voltage/current circuits or a Class 2 power supply for the external power supply.

1	Counter input A (+)	8	Counter contact output 1
2	Counter input A (-)	9	External power supply 24 Vin (GND)
3	Counter input B (+)	10	Counter contact output 2
4	Counter input B (-)	11	External power supply 24 Vin
5	Counter Z-phase input (+)	12	Counter contact input 1
6	Counter Z-phase input (-)	13	Counter contact input 2
7	Counter contact input plus common	14	Counter contact input 3

¹: The external power supply 24 V is common to all axes. Connect one of two connectors or both connectors to the same power supply.
²: Four contact input commons, four deviation pulse clear GNDs, and four pulse output GNDs are connected, respectively, in the module.
³: The F3YP22-0P module does not support three and four axes. Never wire the pins for three and four axes on this module.

ToolBox for Positioning Module for F3YP22/24/28 SF663-MCW

ToolBox for Positioning Module(SF663-MCW) NEW

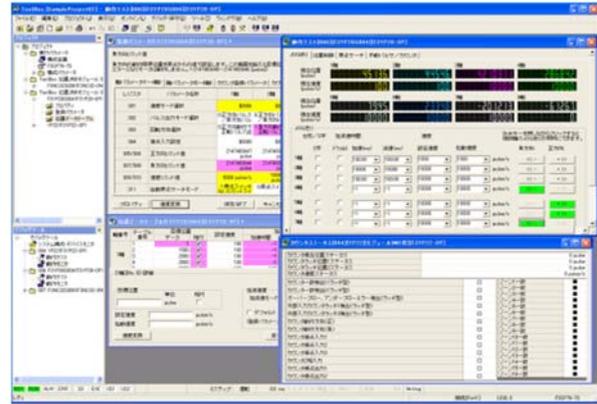

Totally support from set up to maintenance

- Functions: set up registered parameters, position data record and counter of positioning modules
- Action monitoring (Target position, Error status...)
- Action test (JOG, Position control, Origin search, Counter)

Functions

- Editing Parameters
 - Registered Parameters
 - Position Data
- Axis Monitor
- Action test
 - Jog
 - Position Control
 - Origin Search
 - Counter / Manual Pulse Generator

New Products Summary/Instruction Manuals

❖ Positioning Module (with multi-channel output)

Name	Model	Specification
Positioning Module (with multi-channel output)	F3YP22-0P	2-axis control, 7.996 Mpps max. (for servomotor) or 1.999 Mpps max. (for stepper motor) One counter channel for encoder input, 8 Mpps max. Position control/speed control/switching between speed and position control, direct operation/position data record operation
	F3YP24-0P	4-axis control, 7.996 Mpps max. (for servomotor) or 1.999 Mpps max. (for stepper motor) One counter channel for encoder input, 8 Mpps max. Position control/speed control/switching between speed and position control, direct operation/position data record operation
	F3YP28-0P	8-axis control, 7.996 Mpps max. (for servomotor) or 1.999 Mpps max. (for stepper motor) One counter channel for encoder input, 8 Mpps max. Position control/speed control/switching between speed and position control, direct operation/position data record operation

Differences from Positioning Module F3YP14/F3YP18-0N

❖ Differences from Positioning Module F3YP14/18-0N (1)

❖ Comparison of Specifications

- ❑ Software is upward compatible. The existing program operates normally. The maximum number of the module installation is changed from 36 (288 axes) to 16 (128 axes)
- ❑ Hardware is not compatible and requires revision of external wiring, as the external power supply for pulse output is changed from 5V DC to 24V DC
- ❑ Due to control cycle time and startup time are accelerated, adjustment of application may be required.

❖ Comparison of Specifications

Items		Specifications	
		F3YP1□-0N	F3YP2□-0P
Control	Number of control axes	4Axes, 8Axes	2Axes , 4Axes, 8Axes
	Control method	Open-loop control using position reference pulse output	Open-loop control using position reference pulse output
	Output pulse type	RS-422A compliant differential line driver (SN75ALS194 or equivalent) Pulse type selectable for each axis: CW/CCW pulse, travel/direction pulse	RS-422A compliant differential line driver (ISL32172E or equivalent) Pulse type selectable for each axis: CW/CCW pulse, travel/direction pulse, and phase A/phase B pulse
	Output pulse rates (pulse/s)	- Using servo motor CW/CCW : 3,998,000 Travel/direction : 3,998,000 - Using stepper motor CW/CCW : 499,750 Travel/direction : 499,750	- Using servo motor CW/CCW : 7,996,000 Travel/direction : 7,996,000 Phase A/B(x4) : 7,996,000 Phase A/B(x2) : 3,998,000 Phase A/B(x1) : 1,999,000 - Using stepper motor CW/CCW : 1,999,000 Travel/direction : 1,999,000 Phase A/B(x4) : 1,999,000 Phase A/B(x2) : 999,500 Phase A/B(x1) : 499,750

1a	Contact input common ²

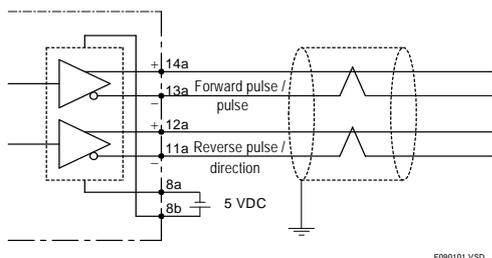

□ Connector for pulse counter

F3YP2□-0P	
1	Counter input A (+)
2	Counter input A (-)
3	Counter input B (+)
4	Counter input B (-)
5	Counter Z-phase input (+)
6	Counter Z-phase input (-)
7	Counter contact input plus common
8	Counter contact output 1
9	External power supply 24 Vin (GND)
10	Counter contact output 2
11	External power supply 24 Vin
12	Counter contact input 1
13	Counter contact input 2
14	Counter contact input 3

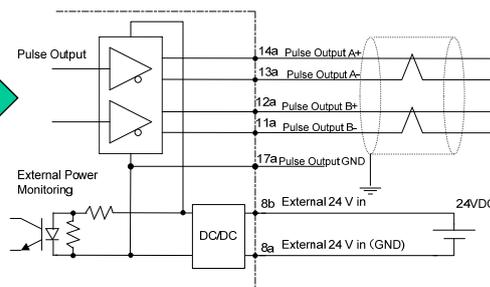

❖ Differences of Pulse Output Connection

- ❑ 24 VDC (20.4 to 26.4 VDC) external power is required for positioning command pulse output of F3YP2x-0P. (5VDC for F3YP1□-0N)
- ❑ The insulated DC/DC ground inside the module is connected to all connectors as the pulse output ground. If the pulse output is received by a line receiver, connect the pulse output ground to the ground of the target device.

● Pulse Output Connections for F3YP1□-0N

● Pulse Output Connections for F3YP2□-0P

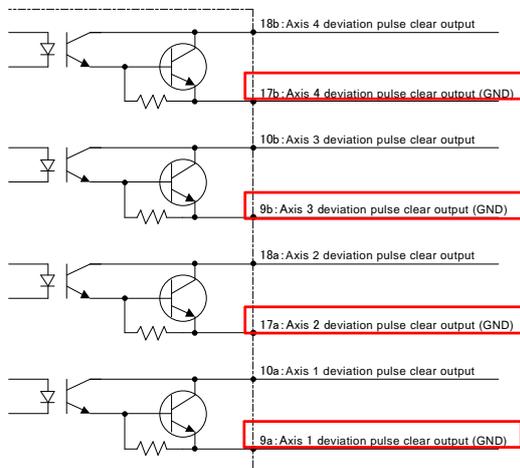

- Change connection to 8b of external power and 8a of external power (GND) from 5VDC to 24VDC
- Change connection to pulse GND of driver from 5Vin(GND) to pulse output GND(17a/17b) if the pulse output is received by a line receiver type motor/driver.

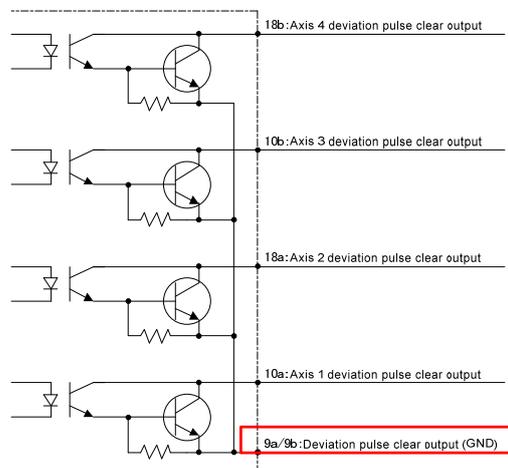

❖ Deviation pulse clear signals

- ❑ F3YP22, 24, and 28 have a shared ground for deviation pulse clear signals. (F3YP14-0N and F3YP18-0N have independent grounds for each axis.)

● F3YP1□-0N

● F3YP2□-0P

- Change from ground deviation pulse clear signals of each axis on F3YP1□-0N (9a/17a/9b/17b) to only 9a/9b on F3YP2□-0P
